NEWSLETTER Nr. 2/2010

June 2010

Dear colleagues,
Dear physicians and dear readers,

You will read in this issue about the comprehensive amendments to improve our lectures for our students. We tried to bring the work from the GP's practice more active in the important main lecture for general practice and family medicine. Although we enjoyed the agile and professional interchange with our colleagues during the preparation. The scientific and interdisciplinary discussion according to long-term effects of sepsis enriches us which we are going to examine together with our colleagues regarding our new scientific project sponsored by Federal Ministry of Education and Research (BMBF).

We are very delighted to provide our medical expertise. Therefore we advice our colleagues in different areas and we would like to support our practice staff, i.e. medical assistants or physician assistants.

Furthermore we had young trainees for office administrators at our department. We wish you an interesting reading.

Best regards,

Yours
Prof. Dr. Jochen Gensichen

Practical training in general medicine 2010

We could enormously boost the share of country practitioner's practice during the practical training in general medicine in this year. More than 2/3 of our active collaborating practices are in rural areas in 2010. Perhaps the students have an increasing interest on the work in a country practitioner's practice.

We think further

Besides our main target to teach medical students we also support our trainees for office administration at the university hospital Jena. They learn the administrative management of our department and will be introduced in all needs of a so called back office.

SMOOTH – sepsis research in Jena

The international accepted main researching focus „sepsis“ in Jena was obviously reinforced by foundation of „Center for Sepsis Control and Care“ (CSCC) at the university hospital Jena by means of funds of Federal Ministry of Education and Research (BMBF). The department of general practice and family medicine campaigns the Sepsis Survivors Monitoring and CoOrdination in Outpatient Health Care (SMOOTH-study). Especially the interface from hospital to GP's long term guidance of sepsis patients should be optimised. So far there has been little knowledge about this topic. The aim is the development of a Disease Management Program (DMP) which includes also elements of patients' training.

Main lecture in general medicine reformed

According to our mission statement the mentioned “bridge” between medical research and general practice lead the reform of our main lecture in general medicine for 264 students in 10th semester. The courses will be planned and arranged by a more theoretical colleague of our department together with a colleague from a GPs' practice. Therefore a more realistic presentation of current scientific knowledge from the practical clinical work of a GP should be taught. More information concerning our lectures can be found here www.allgemeinmedizin.uni-jena.de under heading “lesson”.

Treatment of depression in region Gesunden Kinzigtal

The physician's network „Gesundes Kinzigtal“ near Offenburg im Breisgau will be advised by us to improve the regional health care of patients with depressive illnesses. Therefore physicians and medical assistants were trained to care for these patients safely by the practice team offering case management. The employees were trained by us. The following analysis of health insurance data will show as effective our procedure is.
