

# AXIS 2 Study

Protocol Number: AX200-101

## MRI Worksheet

### Patient

Site #  Screening #  Patient #  Patient initials

### Screening

Ischemic stroke in the MCA territory confirmed by MRI (diffusion)?  Yes  No

Lesion Size of DWI  
 On the slice with largest extension of the infarct the largest diameter has at least 3 cm and is showing on 3 consecutive slices  
 If NO, but there is any other evidence that the lesion is  $\geq 15 \text{ cm}^3$ , give explanation  
 .....

Yes  No

Infarct is lacunar  Yes  No

Any evidence of intracranial hemorrhage by imaging  Yes  No

Strong clinical suspicion of septic embolus  Yes  No

Any thrombosis involving the cerebral veins  Yes  No

High clinical suspicion of vasculitis (e.g. multiple caliber irregularities of intracerebral vessels on MRA plus history of vasculitis)  Yes  No

Any MRI finding indicating that there might be a non-vascular cause for the present neurological symptoms  Yes  No

Any signs on imaging of a mass effect causing shift of midline structures  Yes  No

### Comments

### Signature of responsible MRI person

I certify that I have reviewed all information submitted for this patient and found it to be accurate and complete:
