JSMM Minisymposium - Neuropsychiatric Sequelae of Infectious Diseases

Infectious diseases of peripheral organs have long been recognized for their acute effects on the central nervous system, but recent evidence suggests that patients may also experience persistent long-term adverse effects following infection. This JSMM minisymposium will highlight several aspects of neuropsychiatric sequelae of infectious diseases. We invite you to gain an insight into this interesting field of research and would like to inspire young scientists to work on projects in this area. We look forward to interesting presentations and lively discussions.

Program		
	13:00	Registration
	13:25	Welcome
	13:30 – 14:10	Mechanisms of brain disease following systemic infection Christian Geis Department of Neurology
	14:10 – 14:50	Respiratory infections in the aged host Stefanie Deinhardt-Emmer Institute of Medical Microbiology
	14:50 – 15:20	Coffee Break
	15:20 – 16:00	Body-brain interactions in mental health – Cross-talk between metabolism, inflammation and neural circuits Nils Opel Department of Psychiatry and Psychotherapy
	16:00 – 16:40	Profile and trajectory of cognitive deficits in Post-COVID syndrome and their treatment with computerized cognitive training Kathrin Finke Department of Neurology
	16:40 – 17:00	Coffee Break
	17:00 – 17:40	Post-Sepsis – failure of recovery or new homeostasis Sebastian Weis Institute for Infectious Disease and Infection Control and Department of Anesthesiology and Intensive Care Medicine

Venue

Lecture Hall 2, Jena University Hospital Am Klinikum 1 07747 Jena

Organizers

Prof. Christian Geis
Department of Neurology

Prof. Nils Opel

Department of Psychiatry and

Psychotherapy

Prof. Regine Heller
