Clinical focus

- Facial trauma: hard and soft tissue reconstruction, including reconstruction of the temporo mandibular joint (TMJ)
- Head and neck cancer: resection and reconstruction including microvascular bone-, skin- and connective tissue grafting
- Plastic and reconstructive surgery: cleft lip and palate, craniofacial malformations, orthognathic surgery
- Preprosthodontic surgery and oral implantology

Self-report

Being the only University Hospital in Thuringia the Department of Oral and Maxillofacial Surgery/Plastic Surgery covers the whole field of this specialty. Our services include primary and secondary facial trauma care, including complex reconstruction of hard and soft tissue as well as temporo mandibular joint (TMJ) reconstruction, head and neck cancer surgery including functional and esthetic reconstruction employing microvascular tissue transfer, treatment of cleft lip and palate patients as well as craniofacial malformations, orthognathic surgery as well as oral surgery. Besides patients care, the medical expert stuff at our department is involved in students education as well as clinical research. In cooperation with neighboring specialities our ambulance provide interdisciplinary diagnostic services, treatment and treatment planning to the outpatients and inpatients popu-

lation of the University Hospital Jena. We guarantee excellent treatment based on the latest research and profound experience in case of injury, congenital or acquired malformation as well as all other pathologies in the head and neck region.

Diagnostic spectrum

Our department offers a full range of up to date diagnostic services Interdisciplinary cooperation between the different specialities at the University Hospital Jena allows for detailed diagnosis and treatment planning in case of pathologies in the head and neck region.

Therapeutic spectrum

Special consultation hours for head and neck cancer, bisphosphonate induced osteonecrosis of the jaw, temporo mandibular joint (TMJ) disorders, dysgnathia, plastic and reconstructive surgery as well as oral implantology are offered weekly. In case of advanced head and neck cancer primary reconstruction is routinely performed during the same operation. All reconstructive methods, including microvascular tissue transfer, are established. After completion of primary, multimodal cancer treatment oral rehabilitation by means of

endosteal, dental implants is offered. Besides, primary traumatology secondary corrective surgery focusing on the correction of scars as well as malposition of bone is offered. Furthermore, temporo mandibular joint (TMJ) surgery is performed with a particular focus on reconstructive techniques employing autogenous materials like ear cartilage.

Our interdisciplinary cleft lip and palate center offers a variety of treatment options aiming at functional and esthetic rehabilitation, which provides the potential for a physiologic development of the cleft lip and palate patient.

For dysgnathia our department offers analysis, treatment planning and surgery in cooperation with the referring orthodontist. Dentoalveolar and implantologic, surgical services are provided as well. Our department provides the complete range of plastic and esthetic surgery.

Special Offers/Arrangements/Rooms

All patient rooms feature WLAN, telephone, TV, a small balcony and a wheelchair-accessible bath room. Four single rooms with a private bath room are accessible. In selected cases a relative can also stay with the patient during the hospitalization. For further information please refer to our homepage:
